

# ***Restylane***

**NATURAL BEAUTY MADE IN SWEDEN**

## **POST TREATMENT CHECKLIST**

*There are certain things to pay attention to after treatment of lips and wrinkles with Restylane.*

- Avoid touching treated area within the following 6 hours. After that, a light makeup can be applied and the area can be mildly washed with soap and water.
- Until the initial swelling and redness have resolved, do not expose the treated area to intense heat (tanning bed) or extreme cold.
- Immediately after the treatment, there may be slight redness, swelling, tenderness and an itching sensation at injection sight. This is a normal result of the injection. The inconvenience is temporary and generally disappears in a day or two. If the inconvenience continues, or if other reactions occur, please contact our office.
- The initial swelling after lip treatment may last longer, up to a week, and the lips can look somewhat uneven. This means that the results directly after the injection should not be looked upon as the final result.
- If you have previously suffered from facial cold sores, there is a risk that the needle puncture could contribute to another cold sore eruption.
- If you are using aspirin or any similar medication, be aware that these may increase the bruising and bleeding at the injection site.
- Finally, since Restylane is a natural substance, which dissolves over time, the correction does not last forever. Most people choose to be treated again with in a year of the initial treatment.
